Subject: RE: Revised TWDRs and MRP

Jeff, I have been reviewing the TWDR extensively, and I did have a couple questions, I apologize I didn't catch them on initial review. On the new monitoring requirements section, it lists the influent pH as continuous. Is that a typo, or do we need to install a monitoring device with a chart recorder for that? Also, the EPA has completely separated the discharger and the applier, as far as monitoring and reporting goes. Yet, in ours, I see some WWTP requirements to monitor the crops, and it seems rather vague and open to interpretation, exactly which discharger is responsible for what. Should I bring that up at the in person meeting, or is that something we can address sooner? Sorry to pester ☺

Mike, Joni, and Paul,

Attached are the revised cover letter, tentative WDRs, and MRP for your review. Hard copies will follow in the mail. Feel free to call if you have any questions.
